Il gruppo di ricerca ha studiato l'effetto di un intervento di educazione sessuale e di vita sessuale (ESVS) su un campione di studenti universitari italiani. L'intervento ha avuto luogo in un'aula di una università e ha coinvolto 100 studenti. L'intervento ha consistito in una serie di quattro incontri di 2 ore ciascuno, durante i quali sono stati presentati argomenti relativi alla sessualità, alla contraccezione e alla prevenzione delle malattie sessualmente trasmissibili. Gli studenti hanno compilato un questionario prima e dopo l'intervento, in cui hanno risposto a domande relative alle loro conoscenze, atteggiamenti e comportamenti sessuali. I risultati dello studio hanno mostrato che l'intervento ha avuto un effetto significativo sulle conoscenze e sugli atteggiamenti sessuali degli studenti, ma non ha avuto un effetto significativo sui comportamenti sessuali. Gli autori dello studio hanno concluso che l'educazione sessuale e di vita sessuale è un intervento efficace per migliorare le conoscenze e gli atteggiamenti sessuali, ma che è necessario anche un intervento mirato a modificare i comportamenti sessuali.
